

Immutable Backup Services:

Minimize costly downtime and damage.

Add an extra layer to your cybersecurity strategy with Fruth Group.

More than half of small-to-medium businesses are at a high risk of closing after a data breach. Incorporating data backup and recovery into your cybersecurity strategy is critical to protecting your business and your bottom line. Without a reliable backup approach, your business can run into insurance and compliance challenges.

Immutable backups shield your data from any changes. While more flexible, mutable backups can be corrupted during an advanced cyberattack—rendering your contingency plan irrelevant.

Immutable backups cannot be modified, encrypted, or deleted by anyone during the admin-enforced timeframe. Fruth Group's cybersecurity consultants help you identify your business' backup needs for both your on-premise and cloud servers. Rely on Fruth Group's IT and cybersecurity experts to help you identify the just-right backup strategy for your organization with the right frequency for any immutable backups necessary.

Benefits

With immutable backups, you can rely on a restore of intact, uncorrupted apps and data in the event of a cybersecurity breach. Fruth Group cybersecurity experts help you identify the right backup approach so you can:

- **Avoid regulatory suits**—averting costly legal fines or ransomware payment government sanctions.
- **Safeguard your data against corruption**, taking your backup beyond mutable backups to immutable, so none of it can be altered or compromised in any way.
- **Bounce back from a cybersecurity incident**—sooner with minimal downtime instead of lasting damages that can take your business months or years to repair.
- **Advance your backup approach with technology changes**—keep up with growing data security challenges fueled by big data, wireless networks, and Bring Your Own Device (BYOD) policies.
- **Respond to security threats before they become issues** with Fruth Group flagging and addressing security threats.

Prevent costly downtime and disruption.
