The Shocking Stats Behind Healthcare Cybersecurity Attacks

FRUTH GROUP

Thousands of accounts are breached daily.

$10B
in business costs rack up from cybersecurity attacks annually.

3.4B
phishing emails are sent every day—accounting for 90% of breaches.

90%
of the Internet is made up of the dark web.

300K
new malware are created daily.

33M
data records are expected to be compromised due to phishing attacks this year.

70%
of employees fall for phishing attempts on average.

Healthcare systems are making headlines.

90% of healthcare organizations experience a cyber event annually.

$10K to the mid seven figures in costs hit hospitals hard after a breach.

$644,350 is the average cost of addressing any impact on patient care.

$1.1M in costs racked up for healthcare providers in productivity alone.

HIPAA Compliance without Healthcare Cybersecurity is not enough.

According to Forrester, healthcare organizations primarily focused on HIPAA compliance were blindsided by the increase in cyberattacks at the start of the decade. You can't stop at HIPAA but must also assess your IT technology and infrastructure security and how you operate with third parties. Attacks can have devastating impacts on trust in healthcare providers, sensitive PII exposed and sold, payment and contract information breached, and even control of medical equipment used for life support and other treatments.

Protect your patients and organization with the right cybersecurity approach.

Fruth Group's Cybersecurity solutions connect the right security solutions and services to safeguard your healthcare organization from cyber threats with nine key areas. No matter your hospital or system's needs, each plan includes:

✉ Email Verification

🔑 Password Management

🔒 Multi-Factor Authentication
